

AQRental

Are you going to measure the wind? AQRental is the solution.

AQRental is a package solution where you as a customer get a complete measurement campaign from installation of the measurement equipment to a finished wind report.

Wind- and system monitoring is web based, this gives you as a customer an easy overview of the system and measurement performance.

When renting a system AQsystem handles the operation

When renting a system AQSystem handles the installation, system monitoring and scheduled maintenance service. This means that you as a customer can focus 100% on your core business.

Free upgrades

If upgrades are available for the system these will be installed at the maintenance visits which means that the instrument will always be up to date.

Short start-up period

Since no building permits are necessary to start measuring with sodar equipment the time from decision to measurement start is very short, this saves money and unnecessary time spent searching permits.

Need additional measurements on existing site?

When measuring wind over greater areas some additional measurement points might be necessary. This is an excellent use for the sodar which can be rented for shorter measurement periods.
